## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/05/05 has been entered.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 34-39 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for making stencil, does not reasonably provide enablement for "depositing material under the central portion of the stencil plate" (see claim 34, line 8). The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 34-39 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not known as to how the depositing of the material can be done "under the central portion of the plate" (see claim 34, line 8) when the plate is being set over the semiconductor device. It is noted that for the material to be filled under the central portion of the plate there must be a predetermine gap or spacer between the stencil and the semiconductor device therefrom, and the specification is silent about that.

Further, the amended subject matter such as "depositing ..."; and the subject matter of new claim 39 that make scope of the claim unclear because they directed to method of placing material by using the stencil instead of method of making the stencil alone.

4. Regarding claims 34-39. It is noted that no art rejections have been applied to claims 34-39, since there are a great deal of confusion an uncertainty as to the proper interpretation of the limitations of the above claims. Therefore, it would not be proper to reject such claims on the basis of prior art. See MPEP 2173.06.

#### ***Response to Arguments***

5. Applicant's arguments with respect to rejected claims have been considered but are moot in view of the new ground(s) of rejection.

Applicants' arguments have been acknowledged. However, the amendment to the claim languages has raised new 112 rejections (see above).

***Prior Art References***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Prior art references are cited for their teaching of method of making a stencil or mask for solder paste.
